

CloudPassage and Puppet

Agile security on-demand for cloud and virtual infrastructure

The Benefits of Integration

- Automated security and compliance gap analysis and prioritization
- Deep visibility, operational efficiency, and reduced costs
- Scalable to tens of thousands of workloads on-demand.
- 90 second set-up, with no hardware or virtual appliances to deploy
- Workload visibility and protection in any cloud or virtualized environment

CloudPassage® Halo® is the world's leading agile security platform that empowers customers to take full advantage of cloud infrastructure with the confidence that their critical business assets are protected. Halo delivers a comprehensive set of continuous security and compliance functions right where it counts—at the workload. Our platform orchestrates security on-demand, at any scale and works in any cloud or virtual infrastructure (private, public, hybrid or virtual data center). Leading enterprises like Netflix, Xero and Adobe use CloudPassage today to enhance their security and compliance posture and enable business agility.

The Puppet module for CloudPassage® Halo® automates the deployment, configuration, and management of the Halo agent making it easy for customers to integrate Halo into their existing supply chain and software distribution processes. Using Halo, customers can ensure continuous security throughout their DevOps tool chain from development to distribution. As a result, IT can reduce costs by discovering security issues earlier in their development pipeline, and deploy with confidence and speed knowing their applications are in compliance with their critical security standards.

Whether your infrastructure environment is cloud, virtual, or some combination, rapid, dynamic change is the norm. The adoption of agile methodologies is driving the increase in software releases from once per quarter to more than 1500 per year. This order of magnitude increase in speed and frequency has created a bottleneck in traditional security and IT operations that inhibits the business's ability to keep pace within a competitive and ever-changing market. Traditional security solutions were designed for infrastructure environments where changes were infrequent and manual. Today, security teams need solutions that have been designed and purpose-built for elastic cloud infrastructure where the pace of change demands security and compliance automation. Together, CloudPassage and Puppet have jointly developed a solution that automates security and compliance in any infrastructure at any scale and changes security teams from perceived bottlenecks to active participants in the development process. With the Puppet module for CloudPassage Halo, security teams keep pace with the demands of the modern, agile enterprise.
